

# Hardwood Wedge

**A Pool table adjustment device  
for baseframe issues of several types**

Hardwood of various species and color

( Total "Green" content using recycled wood product )

A wedge is used to adjust for various forms of baseframe level and squareness issues that you cannot fix otherwise. The use of wedges should be avoided if at all possible.

It is often necessary to cut wedges to length prior to use due to table construction and cosmetic issues etc.

Be very careful with wedge placement, insertion, and basic table construction to avoid table and slate damage.
